Overview

Parallel grippers are especially suitable for rectangular or round workpieces.

2-Jaw Parallel Gripper RPP

- With high precision
- Tried and tested T-groove
- Simple interface master jaw / top jaw with 2 interfaces

2-Jaw Parallel Gripper RPP-A

- With high precision
- Tried and tested T-groove
- Simple interface master jaw / top jaw with crosswise slot and position pin
- Predecessor of RPP

2-Jaw Parallel Gripper RMPP-S

- For small parts
- Solid flat guides

2-Jaw Parallel Gripper RDPP-S

- For rough environment
- Sealed square guide

Parallel gripper with high precision and tried and tested T-groove.
Interface master jaw / top jaw with only 2 centering sleeves.

- T-groove for maximum force and torque absorption
- Centric gripping of round and rectangular workpieces
- Universal application due to different types of jaws
- Robust, lightweight housing due to hard coated aluminium alloy
- All sizes available with 2 different stroke lengths
- Design GA with integrated springs as gripping force safety device
- Blast air terminal against dirt accumulation
- Gripper can be mounted on two sides of the gripper
- Optional inductive and magnetic position sensors
- Gripping force safety device as special type for exterior or interior gripping
- Simple interface master jaw / top jaw with only 2 centring sleeves
- Actuated by a double-acting cylinder
- Up to 5 mil. cycles maintenance free

- 1. Robust, lightweight housing**
Hard coated aluminium alloy
- 2. Master jaw**
Positioning of customized gripper fingers
- 3. Wedge-shaped piston**
- 4. Oval pistons**
- 5. Centring sleeve removeable**
Positioning of the gripper jaws quick and cost-effective
- 6. Cap**

- 7. Adjusting spindle**
- 8. Adjusting block**

Description	Stroke per jaw in mm		Gripping force max. in N		Recommended workpiece weight in kg	
	1	2	1	2	1	2
RPP-50	4	2	208	398	0,7	1,45
RPP-64	6	3	316	605	1,5	3

RPP-240	30	17	4309	7324	21	35
RPP-300	35	20	6400	11000	31	52
RPP-380	45	26	9620	16350	48	82

Design RPP:

- 1 long jaw stroke, normal gripping force
- 2 normal jaw stroke, high gripping force
- GA integrated springs as gripping force safety device for exterior tension, thus increased gripping force
- GI integrated springs as gripping force safety device for interior tension, thus increased gripping force

RPP-A

Parallel gripper with high precision and tried and tested T-groove.
Simple interface master jaw / top jaw with traverse groove and position pin.
Parallel gripper RPP-A available on request. Please contact us!

- T-groove for maximum force and torque absorption
- Universal application due to different types of jaws
- Fast and efficient gripping
- Centric gripping of round and rectangular workpieces
- Ideal for series production
- All sizes available with 2 different stroke lengths
- Gripping pressure controlled by change of pressure
- Design GA with integrated springs as gripping force safety device
- Blast air terminal against dirt accumulation
- Up to 5 mil. cycles maintenance free
- Actuated by a pneumatic or a double-acting cylinder
- Gripper can be mounted on two sides of the gripper
- Optional inductive position sensors
- Screw connection or direct connection to compressed air
- Gripping force safety device as special type for exterior or interior gripping
- Previous model to RPP

Parallel grippers RPP-A are available on request. Please contact us!

Tight small-part gripper with solid flat guides

- Flat guides for maximum force and torque absorption
- Gripper jaws made of grinded and hardened steel ensure precision and a long durability
- Robust housing due to hard coated aluminium alloy
- Integrated position sensing for compact design and to minimize the interfering contour
- Maintenance free to 10 mil. cycles
- Available on request: High-temperature-resistant model (up to 150°C)

- 1. Robust, lightweight housing**
Hard coated aluminium alloy
- 2. Gripper jaw**
For individual gripper finger mounting
- 3. Position sensing**
Permanent magnet for direct position sensing of piston movement (starting from size 820)
- 4. Integrated gripping force safety device**
Integrated spring into cylinder as energy storage starting from size 820)
- 5. Removable centering sleeve**
Quick and economical positioning of the gripper fingers
- 6. Mounting and positioning**
Mounting possible at several sides individual positioning of the gripper flexible
- 7. Energy supply**
On several sides possible
- 8. Integrated slot**
Mounting and positioning of magnetic field sensors (starting from size 820)

RMPP-S

Description	Stroke per jaw in mm	Gripping force max. in N	Recommended workpiece weight in kg

2-jaw parallel gripper

RMPP-S

Parallel gripper for rough enviroment with sealed square guide

- Sealed square guide
- Sealed with additional wiper
- High precision due to low play guide
- Optimum transmission of power into gripping force
- Positioning of the customized gripper fingers via centering sleeves
- Maintenance free to 5 mil. cycles
- Available on request: High-temperature-resistant model (up to 150°C)

- 1. Mounting and positioning**
Mounting possible from several sides for versatile positioning
- 2. Permanent magnet**
Installed in the piston area as a signed transmitter
- 3. Wedge hook mechanism**
Synchronized movement of the gripper jaws and high power
- 4. Strong and precise square flat guide**
High forces and moments capacity
- 5. Energy supply**
Air connections available on several sides
- 6. Drive**
Double-acting pneumatic cylinder
- 7. Removable centering sleeve**
Quick and cost-effective gripper finger positioning
- 8. Integrated gripping force safety device**
Optional via intergrated spring (GA and GI Models)

RDPP-S

Description	Stroke per jaw in mm	Gripping force max. in N	Recommended workpiece weight in kg
RDPP-S-50-3	3	85	0,425
RDPP-S-50-1	4	160	0,8
RDPP-S-64	6	280	1,4
RDPP-S-80	8	550	2,75

Individual, cost-effective, lightweight.

The ideal solution for light workpieces:

- Jaws can be designed with free-form surfaces
- Ideal for complex formes and sensitive workpieces
- Individually adapted to your workpiece
- Extremely light in weight
- External and internal clamping possible

Tested fatigue strength:

- More than 10 mio gripping cycles without any signs of wear
- Entirely maintenance-free

Size		2	3	4
A	mm	77	114	168
B	mm	25	35	50
C	mm	33	48	71
Operating pressure max.	bar	6	6	6
Pneumatic connection		M5	M5	M5
Stroke	mm	9	15	22
Clamping force max.	N	25	55	80

Connection geometry and jaws individually adaptable

Variant 1: Mounting at flange

- With draw-down effect
- Image shows the application with internal clamping

Variant 2: Mounting at bar

- Little draw-down effect
- Image shows the application in the RÖHM drill chuck production (External clamping)

Synthetic gripper

RRMP

Synthetic gripper
RRMP

Overview

Centric grippers are especially suitable for round and cylindrical workpieces

3-jaw Centric Gripper RZP

- With high precision
- Tried and tested T-groove
- Simple interface master jaw / top jaw with 2 interfaces

3-jaw Centric Gripper RZP-A

- With high precision
- Tried and tested T-groove
- Simple cut surface of master jaw / top jaw with crosswise slot, positioning pin

3-jaw Centric Gripper RGZP

- With long stroke
- Precise T-groove

3-jaw Centric Gripper RMZP

- For smaller parts
- Precise T-groove

3-jaw Centric Gripper RDZP

- For rough environments
- Sealed square guides

**Centric gripper with high precision and tried and tested T-groove.
Simple interface master jaw / top jaw with 2 centring sleeves and 2 screw threads.**

- Tried and tested T-groove gripping guide for master jaw at max. loads
- Centric gripping of round and angular workpieces
- All sizes available with 2 different stroke lengths
- Gripping pressure controlled by change of pressure
- Sealing air connection to prevent contamination
- Gripper can be mounted on one side of the gripper
- Inductive or magnetic position sensors
- Screw connection or direct connection to compressed air
- Gripping force safety device as a special type for exterior or interior gripping
- Positioning of the customized gripper fingers via centering sleeves
- Up to 5 mil. cycles maintenance free
- Available on request: High-temperature-resistant model (up to 150°C)

Magnetic field sensors

Item no.	For
1083570	RZP-64 - RZP-300

**Centric gripper with high precision and tried and tested T-groove.
Simple interface of master jaw/top jaw with crosswise slot and positioning pin.**

- Tried and tested T-groove gripping guide for master jaw at max. loads
- Fast and efficient gripping
- Centric gripping of round and angular workpieces
- Universal application due to different types of jaws
- Ideal for series production
- All sizes available with 2 different stroke lengths
- Gripping pressure controlled by change of pressure
- Constant clamping force at a constant pressure and thus high clamping precision
- Compact and ergonomic design
- Inductive or magnetic position sensors
- Screw connection or direct connection to compressed air
- Gripping force safety device as a special type for exterior or interior gripping
- Simple interface of master jaw / top jaw with crosswise slot, positioning pin and positioning borehole
- Previous model to RZP

Parallel grippers RPP-A are available on request. Please contact us!

Centric gripper with long stroke and precision T-groove

- Maximum gripping force when opening and closing at minor overall height
- Direct drive synchronized via cam disc
- T-slot guide for maximum force and moment absorption
- Positioning of the customized gripper fingers via centering sleeves
- Up to 10 mil. cycles maintenance free
- Available on request: High-temperature-resistant model (up to 150°C)

- 1. Robust, lightweight housing**
Hard coated anodized aluminium alloy
- 2. Removable centring sleeve**
Quick and cost-effective gripping jaw positioning
- 3. Mounting and positioning**
- 4. Gripper jaw**
Hardened steel, ground
- 5. Precise T-slot guide**
High force and moment absorption
- 6. Cam**
Synchronized jaw movement
- 7. Drive**
Three double acting pneumatic cylinders
- 8. Mounting block**
Mounting for inductive proximity switch

Small-part gripper with precision T-groove

- Gripper jaws made of ground and hardened steel assure precision and long service life
- Central grip action achieved with synchronized positive drive
- Positively driven wedge-hook transmission
- Design GA with integrated springs as gripping force safety device
- Up to 10 mil. cycles maintenance free

- 1. Removable centering sleeve**
Fast and cost-effective gripper finger positioning
- 2. Integrated groove**
Mounting and positioning of magnetic field sensors (from size 31 upwards)
- 3. Robust, lightweight housing**
Hard-coated aluminium alloy
- 4. Power supply**
Possible from several sides
- 5. Positively driven wedge hook mechanism**
Synchronized movement of gripper jaws
- 6. Integrated gripping force security device**
Spring integrated into cylinder as energy storage (from size 31 upwards)
- 7. Position sensing**
Permanent magnet for direct sensing of piston movement (from size 31)
- 8. Precise T-groove**
High forces and moments capacity

Centric gripper RMZP-S

Accessories RMZP-S

Centric gripper for rough environments with sealed square guides

- Sealed square guide
- Sealed with additional wiper
- High precision due to low play guide
- Self-centering due to synchronized positive drive
- Precise positioning of individual gripping jaws
- Up to 10 mil. cycles maintenance free
- Available on request: High-temperature and corrosion resistant model

- 1. Sealed and precise guide for harsh environmental conditions**
High forces and moments capacity
- 2. Robust, lightweight housing**
Hard coated anodized aluminium alloy
- 3. Wedge hook mechanism**
Synchronized gripper jaw movement
- 4. Integrated gripping force safety device**
Spring integrated into cylinder as energy storage (optional in designs GA and GI)
- 5. Permanent magnet**
Installed in piston chamber as indicator for magnetic field sensor (up to size 92/3)
- 6. Energy supply**
Available on several sides
- 7. Drive**
Double-acting pneumatic cylinder
- 8. Removable centering sleeve**
Quick and cost-effective gripper finger positioning

Overview

Overview

Long stroke gripper especially suitable for overhanging workpieces

2-Jaw Long Stroke Gripper RGP

- For rough enviroment
- With long stroke
- Sealed guide

2-Jaw Long Stroke Gripper RGPO - „Premium-Design“

- With long stroke
- Precise T-groove
- Highest precision due to regrounded jaw guides

2-Jaw Long Stroke Gripper RGPO-S

- With long stroke
- Precise T-groove

2-Jaw Long Stroke Gripper RGPO-S/K

- With long stroke
- Precise T-groove
- Postion clamping in case of pressure drop

2-Jaw Long Stroke Gripper RGPL-S

- With long stroke
- Heavy load linear guide

2-Jaw Electrical Long Stroke Gripper REPG

- Flexible
- With long stroke
- Force, distance and speed control
- Workpiece detection

Long stroke gripper for rough environment with sealed guides.

- Gripper body made of high-strength, hard-coated aluminium
- Steering racks, intermediate jaws and gear wheel made of hardened steel
- Intermediate jaws absorb large moments due to a robust-flat guidance of steering racks
- Suitable for long top jaws
- Construction allows long jaw stroke
- Extensively sealed off due to wiping between wiper blade- and intermediate jaw via quad ring
- Centric gripping due to synchronization of the two steering racks with a gear wheel
- Optional, separate delivery of gripping safety device for exterior tension (GA) and interior tension (GI) of gripper
- Tubeless direct connection for central lubrication and sealing air
- Optional tubeless, direct screw connection for power supply

- Simple interface: Gripper intermediate jaw / top jaw (centring sleeves)
- Economical production of top jaws
- Inductive or magnetic positioning sensors
- Maintenance free up to 5 mil. cycles
- Available on request: High-temperature-resistant model (up to 150°C)

Long stroke gripper with precise T-groove.

- Direct drive synchronized via gear wheel
- T-groove guide for maximum force and moment capacity
- High precision due to low play guide
- Process safe due to direct gripper jaw position sensing
- Up to 10 mil. cycles maintenance free
- Available on request: High-temperature-resistant model (up to 150°C)

- 1. Mounting block**
Mounting for inductive proximity switch
- 2. Mounting and positioning**
Mounting possible from several sides for versatile positioning
- 3. Removable centering sleeve**
Quick and cost-effective gripper finger positioning
- 4. Gripper jaw**
Individual gripper finger mounting
- 5. Precise long T-groove**
High forces and moments capacity
- 6. Drive**
Two double-acting pneumatic cylinders synchronized by gear wheel
- 7. Energy supply**
Air connection available on several sides
Caution: always operate long stroke gripper with supplied exhaust air flow control valve (speed regulation)
- 8. Robust, lightweight housing**
Hard coated aluminium alloy

Long stroke gripper with position clamping in case of pressure drop and precise T-groove.

- Workpiece safety¹⁾ in case of pressure drop due to a clamping element
- Dimensions are based on long stroke gripper RGPO-S
- Long stroke, up to max 200 mm per jaw
- T-groove over the entire housing length
- For jaws up to a length of 600 mm
- Compact design

- 1. Clamping element**
Highest retention force at compact design
- 2. Standard gripper**
Except for side screw-on option, all dimensions match the series RGPO-S

¹⁾ A form-fit design of the gripper jaws is presupposed

Long stroke gripper with heavy load linear guide.

- For use under extreme conditions
- Ideal for highest transverse forces and moment capacity
- Direct drive synchronized via gear wheel
- Process safe due to direct gripper jaw position sensing
- Up to 10 mil. cycles maintenance free
- Available on request: High-temperature-resistant model (up to 150°C)

Electrical long stroke gripper with force, distance and speed control as well as workpiece detection

Usable as economic servo axle with integrated propulsion and stable roll guidance...

- Compact axle system for centric movements
- System for the execution of processes such as burnishing or bending

... or flexible robot grip:

- Able to grip parts of various sizes without modification
- With short gripping times from 70 ms
- Able to grip sensitive parts with a force of 10 N
- Able to grip heavy parts up to 400 N
- Able to check parts regarding their dimensional stability
- With a repeat accuracy of 0.03 mm during gripping
- Operational following a simpler and faster start-up

Electrical gripper
REPG

Overview

Angular grippers are especially suitable for round shafts e.g. crank shafts

2-Jaw Angular Grippers RWP-S

- With positively driven lever mechanism
- Robust
- Powerful

2-Jaw Angular Grippers RWP-K-S

- With positively driven lever mechanism
- Infinitely adjustable stroke

2-Jaw Angular Grippers RMWP-S

- For small parts
- Compact

2-Jaw Angular Grippers RDWP-S

- For rough environment
- With positively driven lever mechanism
- Infinitely adjustable stroke

Angular gripper with positively driven lever mechanism - robust and powerful

- Double acting pneumatic cylinder with oval pistons and integrated mechanical gripping force safety device
- Positively driven lever gearing
- Functional parts made of hardened steel ensure high repeat accuracy
- Individual gripper finger positioning via centering sleeves
- Up to 10 mil. cycles maintenance free
- Stroke limitation for infinite setting of the opening angle available
- Available on request: High-temperature and corrosion resistant model

- 1. Cam-switch and mounting block**
Mounting for inductive proximity switch
- 2. Robust, lightweight housing**
Hard coated aluminium alloy
- 3. Integrated slot**
Mounting and positioning of magnetic field sensors
- 4. Permanent magnet**
Sensing of the piston setting position via magnetic field sensors
- 5. Positively driven lever gear mechanism**
Synchronized gripping jaw movement
- 6. Integrated gripping force safety locking device**
Spring integrated into cylinder as energy storage
- 7. Drive**
Double acting pneumatic cylinder
- 8. Removable centering sleeve**
Quick and cost-effective gripping jaw positioning

Angular gripper with infinitely adjustable stroke and guided knee lever mechanism.

- Guided knee lever mechanism
- Central gripping realized by synchronized compulsory guides
- Infinitely variable stroke from 1 - 180°
- High gripping force up to 4250 N
- Optimum transmission of drive force in gripping force
- Design GA with integrated springs as gripping force safety device
- Up to 5 mil. cycles maintenance free

- 1. Buffer stop**
Absorption for heavy and long gripper jaws
- 2. Robust, lightweight housing**
Hard coated aluminium alloy
- 3. Stroke adjustment screw**
Infinitely adjustable opening stroke
- 4. Guided knee lever mechanism**
Synchronized gripper jaw movement
- 5. Mounting block**
Mounting for inductive proximity switch
- 6. Integrated slot**
Mounting and positioning of magnetic field sensors
- 7. Integrated gripping force safety device**
Spring integrated into cylinder as energy storage
- 8. Energy supply**
At several sides possible

RMWP-S

Compact angular gripper for small parts

- High gripping force as a result of optimal direction change of driving force into gripping force
- Direct piston position sensing via magnetic field sensors
- GA models additionally equipped with spring as mechanical gripping force safety locking device (in case of pressure loss)
- Precise positioning of individual gripping jaws
- Up to 10 mil. cycles maintenance free
- Available on request: High-temperature and corrosion resistant model

- Gripper jaw**
Individual gripper finger mounting
- Robust, lightweight housing**
Hard coated aluminium alloy
- Position sensing**
Permanent magnet for direct position sensing of piston movement (starting from size 20)
- Integrated gripping force safety device**
Spring integrated into cylinder as energy storage
- Mounting and positioning**
Mounting possible at several sides for individual positioning of the gripper
- Energy supply**
At several sides possible
- Integrated slot**
Mounting and positioning of magnetic field sensors (starting from size 20)
- Removable centering sleeve**
Quick and economical positioning of the gripper fingers

RDWP-S

Angular gripper for rough environment with guided knee lever mechanism and infinitely adjustable stroke.

- Sealed for extreme applications
- Infinitely adjustable jaw stroke up to 90°
- Double acting pneumatic cylinder with integrated mechanical gripping force safety device
- Positively driven lever gearing
- Functional parts made of hardened steel ensure high repeat accuracy
- Up to 10 mil. cycles maintenance free
- Available on request: High-temperature-resistant model (up to 150°C)

- 1. Stroke adjustment**
Infinitely adjustable opening stroke
Adjusting screw included
- 2. Removable centering sleeve**
Quick and cost-effective gripping jaw positioning
- 3. Robust, lightweight housing**
Hard coated aluminium alloy
- 4. Integrated slot**
Mounting and positioning of magnetic field sensors
- 5. Mounting and positioning**
Mounting possible at several sides for individual positioning of the gripper
- 6. Integrated gripping force safety locking device**
Spring integrated into cylinder as energy storage
- 7. Drive**
Double acting pneumatic cylinder
- 8. Switch cam and mounting block**
Position sensing of inductive proximity switch
- 9. Sealed axis of rotation**
Via radial shaft seal
- 10. Guided knee lever mechanism**
Synchronized gripping jaw movement

Overview

Swivel Units RSP

- With high torque
- Compact construction
- Various design

Swivel Jaws RSBP-S

- With precise transfer of power in torque
- Force transfer via gear wheel set

Swivel Heads as Special Solution

- On request

1 Swivel units = 2 Damping range.

Swivel unit with high torque and compact construction.

Realise both damping ranges, „hard“ and „soft“ with one swivel unit!

- Body made of high-strength hard-coated aluminium
- Steering racks and driver made of hardened steel
- High repeat accuracy, compact design, high torque
- Optional automated operation
- Uniform end-of-stroke damping
- Two damping ranges (hard / soft) realisable with one swivel unit
- Vernier adjustment of dampers at the end position settings
- Usable in all positions
- Separation of the piston chamber in a few simple steps
- Continuously variable end position between $\pm 3^\circ$ or $\pm 90^\circ$
- Inductive or magnetic positioning sensors.
- Ideal bearing of turn table for many millions of cycles
- Optional tubeless, direct screw connection for power supply.
- Up to 8-fold fluidfeeder
- Up to 9-fold cable feed-through

- | | |
|------------------|-------------------------------------|
| 1. Body | 5. Shockabsorber |
| 2. Steering rack | 6. Shock absorber setting |
| 3. Driver | 7. Rough adjustment shock absorbers |
| 4. Stop | |

Universal design is delivered with hard damping range as standard!

Only a few steps to the right swivel unit. The designation of the swivel unit RSP will help you to find the correct product quick and easy. Please see below how easy it works:

1. Choose the size (32 / 42 / 52)
2. Define the damping range (-U / -W)
3. Select the swivel angle (-90° / -180°)
4. Define the end position adjustability 3° or 90°
5. Fluid feeder yes / no?
6. Cable feed-through yes / no?
7. Proximity switch yes / no?

Meaning:

„Pneumatic controlled swivel unit; Size 52; universal damping range (hard damping range presetted), swivel angle 180°; end position adjustability 3°; fluid feeder 8-fold; cable feed-through M8 sensor connector; proximity switch“

Seperation of piston chamber

- Unscrew the threaded pin (1) from the body of the swivel unit.
- Afterwards screw the threaded pin (2) into the internal threaded hole as far as it will go
- Close the external hole of the swivel unit's body again with the threaded pin (1)

Product advantages:

- Easy separation of piston chamber possible by closing the branch canal with the threaded pin
- Compressed air only reaches the areas where the total torque is needed due to the separation of the piston chamber:
 - During many applications, a workpiece is turned or swiveled from position A to position B. On the way back to the starting position the swivel movement usually happens without a workpiece. This means, the total torque is not needed anymore.
- Torque is divided in halves after separation of the piston chamber
- Reduction of air consumption per swivel movement by half
- Saving expensive compressed air

With only a few hand movements you decide whether your swivel unit is damped hard or soft.

Rough adjustment of the shock absorber hardness of universal swivel units.

- Adapting of the damping range possible by moving an adjusting disc
- Swiveling from A to B with workpiece at high torque of inertia: hard damping range (adjusting disc behind the shock absorber)
- Swiveling from B to A without workpiece at low torque of inertia: soft damping range (adjusting disc in front of the shock absorber)
- Up to 50% higher pulsing due to adapting of damping range
- Reduction of spares inventory since both damping ranges, hard and soft, can be managed
- Optimal for applications with overlapping hard and soft damping ranges
- Variation of the operation field at customer specific application changes

RSBP-S

Swivel jaws with precise transfer of power in torque.
Force transfer via gear wheel set.

- Force transfer via gear wheel set
- Precise steering of drive force in torque
- Multi way ball bearing for high torque intake
- End position damping
- Up to 10 mil. swivel cycles maintenance free

- 1. Two way bearing drive shaft**
High force and moment capacity
- 2. Drive flange**
Large size drive flange with end stop and large central hole (from RSPB-S 50)
- 3. Force transfer**
Stable gear wheel set
Precise, reliable, durable
- 4. Position inquiry**
Inquiry of end position 0° and 90° (or 180°) via inductive proximity switch
- 5. Drive**
Double acting pneumatic cylinder
- 6. Air flow control valve**
For speed (included in the delivery)
- 7. Mounting and positioning**
Alternate on several sides for individual assembly of the swivel jaws
- 8. Integrated and patented shock absorbers**
Adjustable end position damping

Overview

Tool Changer

Automatic Tool Changers RSWE-S

- For high handling weights
- Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange

Manual Quick Changing RHSWE-S

- For high handling weights
- Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange

Rotary Distributor

Rotary Distributor

- Integrated electrical and pneumatic media feed through
- Extremely lightweight construction
- Unlimited multiple turning

Rotary Distributor RDV-S

- Integrated electrical and pneumatic media feed through
- Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange

Axis Compensation Modules

Axis Compensation Modules RAE-S

- With precise and robust linear guiding
- Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange

Axis Compensation Modules RAR-S

- With locking function
- Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange

Axis Compensation Modules RFG-S

- With eccentric clamping and centering function
- Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange

Crash Protection

Crash protection RKS-S

- With overload detection
- Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange

RSWE-S

**Automatic tool changer for high handling weights.
Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange.**

- Double acting pneumatic cylinder with integrated pressure spring
- Direct position sensing of the locking piston and of the loose part via proximity switch
- Positive connection due to clamping sleeve fitted index bolts
- Up to 10 pneumatic feed-through
- Housing extremely flat design and weight optimised
- Mechanical emergency release in case of collision
- Up to 5 mil. cycles maintenance free

- 1. Energy element**
Available as accessory
- 2. Drive**
Double-acting pneumatic cylinder
- 3. Integrated spring**
Energy storage in case of drop in pressure
- 4. Robot flange**
Partial mounting circle in accordance with EN ISO 9409-1
- 5. Piston position sensing**
Via magnetic field sensors (available as accessory)
- 6. Locking bolts**
Adapted to the clamping sleeve
- 7. Locking sleeve**
High moment capacity
- 8. Integrated air feed-through**
Air transfer from fix to loose part, tubeless control possible

RHSWE-S

**Manual tool changer for high handling weights.
Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange.**

- Positive connection between locking bolts and clamping sleeve
- High force and moment load
- High handling weight
- Maintenance free

- 1. Loose part**
For tool side assembly
- 2. Locking lever**
With spring supported snap in function
- 3. Fix part**
For robot side assembly
- 4. Locking bolt**
Adapted to the clamping sleeve
- 5. Locking stroke**
Re-adjustable via locking sleeve
- 6. Robot flange**
Partial mounting circle in an accordance with EN ISO 9409-1
- 7. Integrated air feed-through**
Air transfer from fix to loose part, tubeless control possible
- 8. Pre-assembled standard energy element**

Rotary distributor

**Triple air distributor with data transmission system.
For robot-applications with endless-turn movements.
Turn execution pneumatic and electric.**

- Particularly smooth due to use of special materials
- For unlimited multiple turning of the connected robot-grip technology
- The power supply occurs through built-in glide ring contacts and air holes
- Up to 4 feeds at max. 10 bar (pneumatic)
- Up to 10 electrical signals at 60 V and 1 A via glide ring (electric)
- Assembly option without additional adapter plates

- Maximum speed: 100 rpm
- Max. air pressure: 8 bar
- Max. torque: 2.5 Nm
- Weight: approx. 430 g
- Minimal maintenance
- Any mounting position
- Assembly at most robot types without additional adaptor plates
- Safe initiation of torque due to torque support
- Environmental temperature of 5°C to 60°C
- ISO-interface for direct assembly at robot

Rotary distributor

Rotary distributor

RDV-S

**Rotary distributor with integrated electrical and pneumatic media feed through.
Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange.**

- With integrated electrical and pneumatic media feed through
- Vacuum suitable
- Partial circuit produced in accordance with EN ISO 9409-1
- Products with same EN ISO flange can be combined and exchanged
- Up to 10 mil. rotations maintenance free

- 1. Torque brace**
Supports the rotor during rotation (movement)
- 2. Robust housing**
Hard coated aluminium alloy
Nitrated steel
- 3. Robot flange**
Partial mounting circle in accordance with EN ISO 9409-1
- 4. Direct air connection**
To RSWE-S series
- 5. Spring system**
From size RDV-S-50 double fitting
- 6. Collector ring**
Hard gold coated
Transferable to finest currents
- 7. Up to 8 way integrated air feed-through**
For tubeless air transfer
Hose package must not be pivoted
- 8. Up to 12 pole energy transfer**
For cable-free signal transfer
No cables are subjected to torsion

**Axis compensation modules with precise and robust linear guiding.
Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange.**

- Precise and robust linear guide
- Compensation force and compensation stroke continuously adjustable
- Maintenance of any position via friction element
- Centre position secured by cone
- Several sensing options available
- Up to 5 mil. cycles maintenance free

- 1. Piston sensing**
Via magnetic field sensors (available as accessories)
- 2. Robust, lightweight housing**
Hard coated aluminium alloy
Partial mounting circle in accordance with EN ISO 9409-1
Lowest overall height
- 3. Compensation force**
Adjustable via adjustment screw
- 4. Compensation stroke**
Infinitely variable
- 5. Locking piston**
Central via cone
- 6. Eccentric locking**
Via pneumatic piston with frictional contact
- 7. Linear guide**
For highest force and moments capacity
- 8. Compensation plate**
To balance position errors in XY- direction

Axis compensation modules with eccentric clamping and centering function.
Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange.

- Three single-acting pneumatic cylinders with cone pistons at 120° distance
- Single-acting pneumatic cylinder with friction disc
- Function parts from nitrided steel high wear resistance
- Up to 5 mil. cycles maintenance free

- 1. Energy feed**
Centering
- 2. Robust, lightweight housing**
Hard coated aluminium alloy
- 3. Robot flange**
Graduated circle (TK) in accordance with EN ISO 9409-1
- 4. Drive eccentric mounting**
Single effect pneumatic cylinder with friction disc
- 5. Drive centring-acting**
Three single pneumatic cylinders with cone pistons at 120° distance
- 6. Energy feed**
Eccentric clamping
- 7. Force transfer**
Direct and low-loss via cone/friction disc
- 8. Compensation**
Force-free compensation of position inaccuracies
Up to +/- 4 mm stroke compensating stroke

RAR-S

**Axis compensation element with precise and robust linear guiding.
Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange.**

- To compensate misalignments at loading of chucks, at unloading from fixtures or at assembling of components
- Low own weight, thus higher extension load possible on robot
- Partial mounting circle in accordance with EN ISO 9409-1
- Up to 5 mil. deviation maintenance free
- Single effect pneumatic cylinder with spring return

- 1. Robust, lightweight housing**
Hard coated aluminium alloy
- 2. Robot connecting flange**
Partial mounting circle in accordance with EN ISO 9409-1
- 3. Locking**
3 locking pistons
Nitrated steel
- 4. Spring package**
Version size 63, stronger one is available
Version size 100, 3 springs can be removed
- 5. Locking drive**
Single-acting pneumatic cylinder
- 6. Energy feed**
- 7. Guiding bolts with taper washer**
Nitrated steel

Crash protection with overload detection.

Integrated pitch circle EN ISO 9409-1 for a direct connection to the robot flange.

- Overload recognition in Z direction up to 18 mm stroke
- In horizontal direction up to 12.5°
- On rotation around the Z axis 360°

- 1. Energy feed**
- 2. Robot connecting flange**
Partial mounting circle in accordance with EN ISO-9409-1
- 3. Drive**
Single-acting pneumatic cylinder
Response sensitivity adjustable via operating pressure
With integrated spring
- 4. Force transfer**
Direct and low-loss at piston surface
- 5. Pressure differential switch**
Indirect overload recognition
- 6. Sensors**
Inductive proximity switch generates a signal which can be used to recognise an overload situation
Generates an automatic emergency off system situation
Included in the delivery: inductive proximity switch Ø 8 mm with cable connection M8x1
- 7. Connecting flange**
Partial mounting circle in accordance with EN ISO 9409-1
- 8. Overload recognition and compensation**
In Z-direction up to 18 mm stroke
Angular deflection up to 12.5°
On rotation around the Z axis 360°

RKS-S

Tool group C40

RKS-S-125 - Crash protection

Item no.	1242716 
Design	RKS-S-125
Connecting Flange to EN ISO 9409-1 TK	125
Recommended handling weight kg	100
Horizontal deviation +/- mm	9
Deviation Z mm	23
Weight kg	8
Ø mm	208
Height mm	136

Tool group C40

RKS-S-160 - Crash protection

Item no.	1242717 
Design	RKS-S-160
Connecting Flange to EN ISO 9409-1 TK	160
Recommended handling weight kg	150
Horizontal deviation +/- mm	9
Deviation Z mm	28
Weight kg	15,2
Ø mm	276
Height mm	161

Individual, cost-effective, lightweight.

The ideal solution for light workpieces:

- Jaws can be designed with free-form surfaces
- Ideal for complex formes and sensitive workpieces
- Individually adapted to your workpiece
- Extremely light in weight
- External and internal clamping possible

Tested fatigue strength:

- More than 10 mio gripping cycles without any signs of wear
- Entirely maintenance-free

Size		2	3	4
A	mm	77	114	168
B	mm	25	35	50
C	mm	33	48	71
Operating pressure max.	bar	6	6	6
Pneumatic connection		M5	M5	M5
Stroke	mm	9	15	22
Clamping force max.	N	25	55	80

Connection geometry and jaws individually adaptable

Variant 1: Mounting at flange

- With draw-down effect
- Image shows the application with internal clamping

Variant 2: Mounting at bar

- Little draw-down effect
- Image shows the application in the RÖHM drill chuck production (External clamping)

The headquarter: our parent plant in Sontheim/Brenz.

The RÖHM parent plant is located in Sontheim/Brenz. In this ultra-modern production facility comprising 41,000 m², optimum conditions have been achieved in order to solve the extensive range of discerning construction and production tasks making the company even better, faster and more efficient in the future.

Sontheim/Brenz

All national and international activities are planned and co-ordinated at the administrative headquarters in Sontheim. Thanks to the excellent infrastructure and transport routes available, this location is ideal for a company relying on perfect product quality as well as maximum flexibility. Furthermore, the region around Sontheim offers another key basis for the success of our company: it is rich in quality awareness and motivated employees with the result that we are ideally prepared for the challenges of the future. The parent plant uniquely unites mass production, serial production and customised individual production under a single roof.

Key locations for the company: Dillingen and St. Georgen.

Such strong growth on the part of the RÖHM Group is also obviously associated with higher requirements on development and production capacities. The demands of today and tomorrow can be complied with the two facilities in Dillingen and St. Georgen.

Dillingen/Danube

St. Georgen

Plant: Dillingen/Danube | This branch plant in Dillingen was put into operation by the RÖHM Group as early as 1953. Thanks to extremely positive development, the plant is subject to constant expansion and modernisation. For this reason, new modern production facilities were built in 1982 and 1991. In 2007 RÖHM built a new production hall for two portal turning and milling machines. This enables machining of workpieces up to 4 metres in length which will secure a leading market position for the RÖHM brand in the future.

More than 300 employees are primarily involved in engineering and manufacturing lathe chucks, machine vices and special clamping equipment for turning and milling machinery as well as for machining centres.

Engineering and sales department St. Georgen | Apart from standard mandrels, tailor-made solutions for a wide variety of requirements are also manufactured here in this small but accomplished high-tech forge. RÖHM retains mechanical or power-operated mandrels, sliding jaw mandrels and hydraulic mandrels for its customers for tensioning workpieces in drill holes or interior contours.

Always close to our customers. With locations all around the world.

Customer orientation at RÖHM has less to do with marketing than with attitude. We consider customer proximity as an intensive dialogue with our partners as well as direct presence on key international markets.

General conditions of sale and delivery

§ 1 Quotation, Formation of Contract and Content of Contract

1. The present General Terms of Sale and Delivery apply exclusively. We do not recognise any terms and conditions that are contradictory or different from our own, unless we have explicitly given our written agreement to do so. Our Terms of Sale and Delivery will also apply if we effect delivery to the Purchaser without any reservation in full awareness of the contradictory or different nature of the terms of the Purchaser, as compared to our own Terms.
2. Our quotations are always subject to change without notice unless they have been explicitly described as binding. The contract will only materialise upon our written confirmation and in line with the content thereof and by way of performance/delivery on our part. If delivery/service is immediately provided without any confirmation, the invoice will also be deemed to be the order confirmation.
3. Our General Terms of Sale and Delivery will only apply to a business entity as defined in Section 14 BGB [German Civil Code].
4. Costs for the compilation of drawings for specific constructions will be borne by the Orderer if, for reasons for which we are not responsible, the quotation does not lead to an order placement.
5. All particulars regarding weights, dimensions, services and technical data that feature in our printed matter, catalogues, price lists or in other contract documents are only approximate, unless they have been explicitly described as binding.
6. We retain the right to amend the construction and form of the subject of contract, providing this does not involve unreasonable alterations for the Orderer.
7. The documentation comprises an assembly layout, piece list with details of the wearing and spare parts, as well as operational and maintenance instructions; this is always in the German language. Documentation is only in paper form or in digital form. For digital forms, the texts are provided in the formats .TXT, .RTF or .DOC; drawings and piece lists are in the .TIF format (grid format). Any documentation in excess thereof will be billed and is subject to particular arrangement.
8. For testing, when specific temperatures, times and other measurements or control values are to apply, the appropriate measurement methods must be specified prior to delivery and acknowledged by both Parties. Unless such values are so defined, our own measurement methods will apply.
9. Samples will only be delivered subject to a fee.
10. Assurances given, ancillary agreements and changes to the contract will require the written form to be operative. It will not be possible to waive this requirement.
11. An order placement will be deemed irrevocable unless the Deliverer has agreed in writing to cancel it.
12. For export transactions, delivery will be subject to the conditions specified on the order confirmation; in addition, the respectively current version of the international trade definitions most commonly used in international sales contracts (incoterms 1953) will apply as devised by the International Chamber of Commerce.
13. In addition to the General Terms of Delivery and Sale, compliance with our "product information" sheets, the technical data sheets as well as other product-specific publications will apply, each in their current version.

§ 2 Prices

1. Failing specific written agreement, prices apply as in the Federal Republic of Germany, free house plus the value added tax required by law. For export transactions, the item to be delivered is deemed sold "ex works", unless the contract stipulates otherwise about the type of sale. For single orders for a value of goods less than 100.00 € net, a handling fee of 10.00 € plus the value added tax required by law will be charged throughout the country.
2. Please note that we only despatch the consignment at the request of the customer. Irrespective of this, the rulings laid down in Section 5 will apply.
3. We bill the prices that were valid when the contract was drawn up, based on the cost factors applicable at the time. Should these cost factors (particularly material, wages, energy etc.) alter during the period between the drawing up of contract and the agreed delivery time, we will be entitled to amend prices accordingly. For export transactions, the Deliverer will be entitled to cancel that part of the order that has not yet been completed or to adjust prices appropriately if the currency in which the contract was drawn up has devalued.
4. With an "ex works" contract, the goods will be transported at the expense and risk of the Orderer. For all consignments, the respectively current version of the provisions of incoterms 1953 will apply to the insurance and bearing of risk.
5. For parts/products that are produced in line with Purchaser requirements, we will notify the Purchaser of our production quantity. The Purchaser undertakes to take receipt of the quantity thus confirmed.
6. Over-deliveries and short-deliveries are admissible up to 5%; for special tooling up to 10% is admissible, at least, however, 2 (two) pieces. The respective delivery will be billed.

§ 3 Modalities of Payment

1. Failing specific arrangements, payment is due without deduction and without charges within 10 days of the date of invoice - even for delivery instalments.
2. We are not bound to accept cheques or bills. In the event cheques or bills are accepted subject to prior arrangement in individual circumstances, this will only be as conditional payment, taking due account of discount charges and collection fees that are to be paid immediately in cash by the Customer. The ultimate credit entry of bills of exchange and cheques will be after their redemption. The acceptance of cheques or bills will be without prejudice for subsequent commitments to payment. We will not be liable for the punctual presentation, protest, notification and return of a bill in the event it is not honoured.
3. Any overshooting of the payment deadline will incur interest to the amount of the banks' borrowing costs, at least, however 8% in excess of the respective basic interest rate of the European Central Bank.
4. If a bill or a cheque is not honoured on time or if a deadline for payment is over-reached, all receivables still outstanding, including those that are deferred and those for which bills or cheques have been given, will become due for immediate payment.
5. The Purchaser will only be entitled to offset if the counterclaims he asserts have been established by declaratory judgment, if they are undisputed or have been acknowledged by us. The Purchaser will be authorized to exercise a right of retention to the extent his counterclaim is derived from the same contractual relations.
6. For export transactions, payments will be paid subject to the modalities of payment contracted.

7. Costs of payment transactions, particularly bank charges of foreign payment transfers to us, are in principle for debits of the client.

§ 4 Delivery Period

1. The delivery period we specify begins to run providing all technical issues have been fully clarified. The delivery deadlines we give are in principle not binding and only constitute a probable delivery time.
2. The compliance with our commitment to deliver depends on the Purchaser having punctually and properly fulfilled his commitments, particularly his commitment to comply with the contracted terms of payment. The right to plea non-performance of contract will be retained.
This right will also be derived from commitments that have not been satisfied in full from previous deliveries.
3. The period of delivery commences upon the despatch of the order confirmation, yet not before the Orderer has provided the documents, permits, clearance papers etc. to be procured and not before the agreed deposit has been received.
4. If a fixed delivery date has been arranged, the Deliverer will effect delivery on time. Compliance with the delivery period will be deemed given if the item to be delivered has left the works or the readiness for despatch has been notified before the expiry of said delivery period, subject to timely and accurate delivery from our own suppliers. If the Orderer amends parts of the consignment to be delivered, the delivery period will run anew upon confirmation of said amendment.
5. Force majeure, war, uprising, strike, lock-out or measures enforced by the authorities for whatever reason that impede delivery, as well as a lack of raw materials, means of transport and theft – even with our own suppliers – will release the Deliverer from his commitment to deliver within the specified period of time. The Orderer will be notified immediately of the occurrence of the hindrance and of the likely repercussions.
6. It is admissible to effect delivery prior to the expiry of the specified delivery period and to deliver in appropriate instalments.
7. Compliance with the delivery period depends on the fulfilment of all contractual duties of the Orderer.
8. In the event of delivery delays or of the impossibility of delivery, the provisions of Section 10 will apply.

§ 5 Transfer of Risk and Taking Receipt

1. Risk will pass to the Orderer at the latest with the despatch of the consignment, even if delivery is to be in instalments or if we still have other services to provide, e.g. despatch costs or transport and delivery as well as installation.
2. At the request and at the expense of the Orderer, we will ensure insurance cover of the consignment to be delivered for theft, breakage and damages from transportation, fire and water and for other insurable risks.
3. If despatch is delayed for reasons for which the Orderer is responsible, the risk will pass to the Orderer as from the date of readiness for despatch; nevertheless, we undertake to ensure insurance cover at the request and expense of the Orderer as called for by the Orderer.
4. Even if the delivered items feature insignificant defects, the Orderer will take receipt thereof irrespective of the rights laid down in Section 8.

§ 6 Default of Acceptance, Call-off Orders

1. If the Orderer fails to take receipt of the items contracted on time, we will be entitled to set the Orderer a subsequent period of grace after which we will be entitled to dispose of the items otherwise and supply the Orderer subject to a subsequently lengthened delivery period. Irrespective of this, we will be entitled to withdraw from the contract as defined in Section 326 BGB [German Civil Code] and to call for compensation for damages owing to non-performance. In the event we call for compensation for non-performance, we will be able to claim compensation of 25% of the agreed price plus value added tax without having to provide evidence. We retain the right to assert actual damages of a greater dimension.
2. Orders, which we confirm for call-off must be accepted within one year of the date of order placement at the latest - unless otherwise arranged. The same will apply to fixed reservations or to permanent "call-off" statuses. Section 6.1 will apply accordingly in the event the goods are not called off.

§ 7 Retention of Title

1. The items for delivery (the goods subject to the retention of title) will remain our property until all claims to which we are entitled from the Purchaser from the business relations have been satisfied in full. Where the value of all security interests to which we are entitled against the Purchaser exceeds all secured claims by more than 10%, we will release some of the security interests as appropriate at the request of the Purchaser.
2. During the period in which title to the goods is retained, the Purchaser is not allowed to pledge or assign the goods as security and is only permitted to resell to resellers in normal business transactions and only providing the reseller receives payment from its own customer or subjects the customer's ownership of the item to the full satisfaction of the customer's commitments to payment.
3. In the event of attachment, seizure or any other disposition or third-party intervention in respect of the goods, the Purchaser will notify us immediately so that we can file action subject to Section 771 ZPO [German Code of Civil Procedure]. If the third party is not able to reimburse us for the court and out-of-court costs of legal action pursuant to Section 771 ZPO, the Purchaser will be liable for the loss we thus incur.
4. The Purchaser undertakes to treat the item purchased with care. In particular, the Purchaser undertakes at his own expense to ensure it is adequately insured at reinstatement value against damages from fire, water and theft. Should maintenance and inspection work be required, the Purchaser will have this carried out in good time at his own expense.
5. In the event of breaches of duty on the part of the Purchaser, particularly with default in payment, we will be entitled to cancel the contract and to take back the goods; the Purchaser undertakes to surrender the goods. If we take back the goods and/or assert the retention of title, this does not mean we are cancelling the contract, unless we have explicitly declared as much.

General conditions of sale and delivery

6. If the Purchaser has resold the item purchased in regular business transactions, the Purchaser herewith now assigns to us all claims to payment in the amount of the final invoice amount (including value added tax), such as due to the Purchaser from the resale to his customer or a third party, irrespective of whether the item purchased has been resold without or after further reworking. The Purchaser remains authorized to collect this payment, even after assignment. Our own authority to collect payment ourselves will not be affected hereby. However we undertake not to collect payment providing the Purchaser satisfies his own commitments to payment from the proceeds collected, does not default in payment and in particular providing the initiation of insolvency proceedings is not petitioned or payments cease to be made. Should this, however, be the case, we will be able to demand that the Purchaser provides us with details of the assigned payments and their debtors as well as all information necessary to collect payment, that he hands over the relevant documentation to us and notifies the debtors (third parties) of the assignment.

7. The processing or reworking of the item purchased by the Purchaser will always be carried out on our behalf. If the item purchased is processed with other items not belonging to us, we will acquire co-ownership to the new item to the value of the item purchased (final invoice amount including value added tax) in relation to the other processed items at the time of reworking. The same will apply to the thus newly created items as for the items delivered subject to retention of title.

8. If the item purchased is processed with other items not belonging to us, we will acquire co-ownership to the new item to the value of the item purchased (final invoice amount including value added tax) in relation to the other processed items at the time of reworking. If the intermixing is such that the Purchaser's item is to be deemed the main item, it is herewith agreed that the Purchaser will transfer co-ownership to us proportionately. The Purchaser will keep the property in which we hold exclusive ownership or co-ownership on our behalf.

§ 8 Quality Defects

We are liable for defects in quality as follows:

1. All parts or services will be remedied, at our discretion, free of charge or redelivered or provided again that are found to feature a quality defect during the statutory period of limitation - irrespective of service life - providing the origin thereof already existed at the time of the passing of risk.
2. Claims to quality defects will become statute-barred in 12 (twelve) months. The period of time commences with the passing of risk (Section 6).
3. The Purchaser will immediately file written objection to the quality defect with us.
4. In the event objections are filed, the Purchaser will be permitted to refrain from payment to an extent appropriate to the quality defects featured. The Purchaser will only be able to refrain from payment if an objection is asserted, the justification of which cannot be doubted. If the objection has been asserted unjustifiably, we will be entitled to call for the reimbursement of the expenses incurred by us.
5. Initially we will always be granted an opportunity to remedy a defect within an appropriate period of grace.
6. Should the remedy fail, the Purchaser – notwithstanding any claims to damages – will be able to cancel the contract or reduce remuneration. The Purchaser will only be able to call for the reimbursement of fruitless expenditure if the defect in question is attributable to our own wilful intent or gross carelessness for which we are responsible.
7. Claims to defects in quality are not given if the divergence from the agreed nature of the product is only minimal, if usability is only insignificantly impaired, in cases of natural depreciation or damages generated after passing of the risk as a result of faulty or negligent treatment, excessive exposure, unsuitable operating media or because of specific outer impact that was not to be expected given the contract, as well as in cases of non-reproducible software errors. If amendments or repair work is carried out improperly by the Purchaser or by third parties, there will be no claims to the defects resulting or the effects thereof. The same will apply to a lack of compliance with our instructions on handling and other instructions and if maintenance is not carried out properly.
8. Claims of the Purchaser to a refund of the expenses incurred for the purpose of remedy, such as costs of transport, travel, labour and materials will be ruled out, when such expenses increase because the item delivered was brought to a destination other than the Purchaser's branch premises, unless said relocation is in accordance with the intended use of the item.
9. Legal claims to recourse against us on the part of the Purchaser will only be given if the Purchaser has entered into no agreement with his customer in excess of those claims to defects regulated by the law.
10. Claims to compensation for damages will be governed by Section 9. Any farther-reaching claims to quality defects or others than those governed in this Section or in Section 9 will be ruled out.

§ 9 Industrial Property Rights and Copyrights, Defects of Title

Unless otherwise agreed, we undertake to only effect delivery free from proprietary rights and third party copyrights (referred to in the following as industrial property rights) in the country of the delivery destination. In the event a third party files justified claims against the Purchaser for a breach of industrial property rights derived from deliveries we effected that are being used as contracted, we will be liable towards the Purchaser for the period of time specified in Section 8.2 as follows:

1. At our discretion and at our own expense, we will either procure a licence for the deliveries in question, alter them so that there is no breach of industrial property rights or we will provide a substitute. Should this not prove possible at appropriate conditions, the Purchaser will be entitled to the rights of cancellation or reduction as laid down by the law. The Purchaser will only be able to call for the reimbursement of fruitless expenditure if we are to blame for wilful intent or gross negligence. Our commitment to provide compensation for damages is governed by Section 10.
2. The above commitments will only be given if the Purchaser has given us immediate, written notification of the claims asserted by the third party, does not recognise any breach of rights and if we retain the right to initiate defence measures and negotiate a settlement. If the Purchaser ceases to use the item delivered in order to reduce damages or for other good cause, the Purchaser undertakes to inform the third party that this discontinuation of use does not embody any acknowledgement of a breach of industrial property rights.
3. Claims of the Purchaser will be ruled out if the Purchaser is responsible for the breach of industrial property rights.
4. Any claims of the Purchaser will also be ruled out if the breach of industrial property

rights was derived from specific specifications of the Purchaser, from an application that we could not foresee or from the item delivered being altered by the Purchaser or used in combination with products that we have not delivered.

5. In the case of breaches of industrial property rights, the provisions of Sections 8.4, 8.5 and 8.9 will apply appropriately to the claims of the Purchaser governed by Section 13.

6. Any farther-reaching claims to defects of title of the Purchaser or claims other than those governed by the present Section 9 against us or our vicarious agents will be ruled out.

§ 10 Overall Liability

1. Claims of the Purchaser to compensation for damages – irrespective of the legal nature of the claim asserted – will be ruled out.
2. The exceptions are:
 - a) Damages due to the violation of major contractual duties (cardinal duties). However, in the case of simple negligence, liability for damages will be restricted to foreseeable, typically occurring damages.
 - b) Damages derived from injury to life and limb if we are responsibility for the breach of duty.
 - c) Damages attributable to wilfully intentional or negligent violations, said breach of duty on the part of our legal representatives or vicarious agents being of equal status to any breaches of duty on our part.
 - d) Claim to damages for impossibility or inability.
3. Any alteration of the onus of proof to the detriment of the Purchaser does not relate to the above provisions.
4. Liability subject to the Product Liability Act remains unaffected hereby.
5. Where liability for compensation is ruled out or restricted in our respect, this will also apply to the personal liability for damages of our employees, our trade representatives and our vicarious agents.

§ 11 Duties to Involvement of the Purchaser

1. The involvement of the Purchaser that has been agreed to explicitly or implicitly in the contract will be subject to no specific remuneration, unless otherwise explicitly agreed.
2. The Purchaser undertakes to inform us in good time of all facts, which indicate that stocks and products we have made available in the light of our notified production capacities cannot be used or not be used in full. Where stock remains, in the case of a premature change to his planning, the Purchaser will take over the remainder and any costs of destruction that might be incurred. This will also apply to products for which we have had to place orders for minimum quantities from our own suppliers, providing we previously advised the customer thereof.
3. The Purchaser guarantees that the products delivered by him for reworking are suitable for the purpose. We do not undertake to check the products delivered by the Purchaser for their quality and aptitude for reworking. In ongoing business relations and whenever an item for reworking has been initially checked, tested and released, the Purchaser undertakes to inform us in writing of each and every product amendment without actually being requested to do so. When items are being reworked, after every change in production conditions on his premises, in particularly when substituting tooling, machinery or introducing new production processes, the Purchaser also undertakes to examine the item to be processed by us for any divergence and alteration and to notify us in writing of any such divergence and alteration.
4. Instructions from our Purchaser, the selection of material or other specifications laid down by the Purchaser do not oblige us to check them for accuracy.
5. The Purchaser will hence check all instructions it issues as well as the quality of the material specified to us or made available to us for compliance with the law and technical regulations.
6. Should the Purchaser default in terms of its duties to provide or to become involved, we will be entitled to the rights stipulated by law.
7. In any case, goods may only be returned subject to the explicit consent of the Deliverer. Their return will be free-house and details of the order number and delivery date will be given as well as the original delivery packaging. The goods will be in their original condition, i.e. in an undamaged state. For the handling of a return, we charge 20% of the value of the goods, at least, however, 50.00 € plus value added tax. In individual circumstances, the Deliverer retains the right to charge the Orderer a higher sum based on evidence.

§ 12 Place of Performance and Jurisdiction/ Other

1. The place of performance and payment will be the registered office of our company in Sontheim/Brenz.
2. Exclusively the laws of the Federal Republic of Germany will govern the present contractual relations. The application of the United Nations Convention dated 11.04.80 on Contracts for the International Sale of Goods (CISG – "Wiener Kaufrecht") is ruled out.
3. For all disputes derived from contractual relations, if the Orderer is a registered businessperson, a legal entity under public law or a separate estate under public law, legal action will be filed with the court of law with jurisdiction for our registered office. We will also be entitled to file legal action at the location of the registered seat of the Orderer.
4. Should any one condition of our General Terms of Sale and Delivery be void for any reason whatsoever, the validity of the remaining provisions will not be affected hereby.
5. We will save your data in accordance with Section 23 BDSG [Federal Data Protection Act].

RÖHM GmbH

D-89565 Sontheim/Brenz

Revised: September 2012

” RÖHM – we’re here to serve you.

We offer real partnership.

We see this reflected in collaborative partnerships both with specialist dealers as well as directly with consumers. We offer sound advice, provide comprehensive support and do our utmost for you, so that you get exactly the right solution for meeting your targets safely and economically. And if there isn't a solution available yet, then we'll design it.
