

# INTRODUCING

## WILSON DEBURRING TOOLS

### FOR TRUMPF MACHINES

**Remove the need for expensive secondary deburring operations; your sheet metal components can be deburred at your punch press using the new WILSON DEBURRING TOOLS for Trumpf machines.**

The Wilson Deburring range displaces the burr material, coining a chamfer on the edge of your components and holes.

The WILSON WHEEL ROLLING DEBURRING TOOL is used for deburring long edges and profiles, while the DEBURRING MULTI-TOOL is used to remove burrs from smaller geometry or holes.

**The range can be used in mild steel, stainless steel and aluminium up to 2.5mm thick.**

Components come off your punch press almost completely burr-free, making them consistently high-quality and safe to handle.

**Note: Wilson Deburring Tools for Trumpf Machines require Trumpf Deburring Software option to function.**
